# Vaginal sample kit

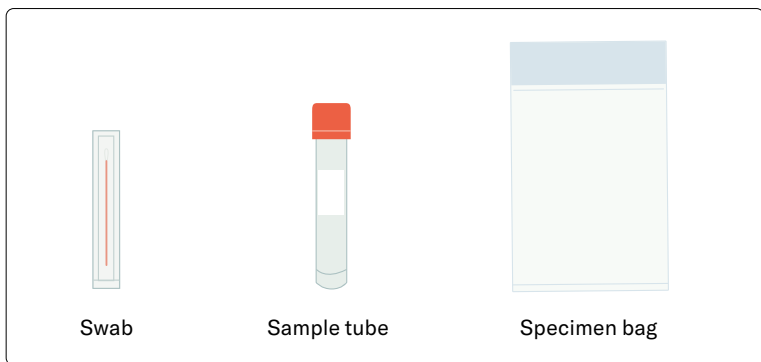

This kit is for you to take samples (swabs) for testing for infections called chlamydia and gonorrhoea, which are passed on from one person to another during sex.

You can have these infections without symptoms.

They are easily cured with antibiotics.

## What is in my kit?

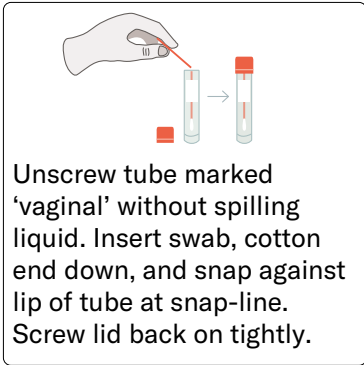

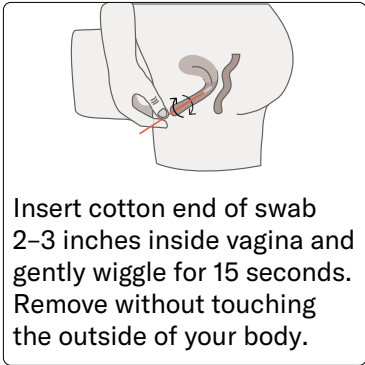

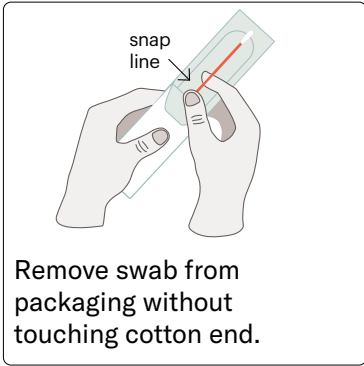

*Contents may vary slightly*

Your kit also includes an absorbent pad that your samples should be returned in and a request form that requires you to not  date that you took the test.

Please refer to the STI Kit Instructions leaflet for instructions on how to return the kit to us.
